Plant Characteristics Tables

The physical and environmental characteristics for a number of landscape plants are given here. Unless otherwise noted, plants on this list are hardy in Central Indiana, tolerant of the built environment, easily maintained, and commercially available. Other suitable plants may be commercially available as new cultivars are developed.

The tables are arranged by plant size (largest to smallest), and they specify the following characteristics:

- Evergreen Plant – useful if you want year-round interest or if you need a screen to block a view.
- Average Spread – denotes the average diameter of a plant's foliage so that you will have some idea of the mature size of a plant.
- Growth Rate – denotes the speed at which a plant will grow given typical growing conditions. (Slow = 12" or less in one year. Moderate = 12"-24" in one year. Fast = more than 24" in one year.)
- Density – denotes how easy it is to see through a plant's foliage.
- Form – denotes the shape of the plant's foliage and limbs.
- Sunlight Requirement – denotes the amount of sunlight required by a plant.
- Soil Moisture Requirement – denotes the amount of soil moisture required by a plant. (Wet = 9"-12" of water available in the soil. Moderate = 6"-9" of water available in the soil. Dry = 3"-6" of water available in the soil.)
- Comments – lists any special attributes and/or requirements for a plant. It also lists available and proven cultivars.
